AM Series Venturi Mixer

Features

- The combustion capacity is adjusted at will by the function of air butterfly valve.
- The control motor connected to the air butterfly valve can be controlled automatically.
- The mixture ratio of gas to air maintains a certain ratio in the whole combustion process.
- The adjustment is relatively high.
- Gases with a calorific value of 3600 to 30000Kcal/m³ can be used.

The specification of the nozzle varies with the calorific value.

Product Description

AM Venturi High efficiency Mixer one of our products, the gas is ejected at high speed through supersonic nozzles using the pressure of gas itself, which forms negative pressure in the suction chamber, injects air into the outside world, and is fully mixed with gas in the Venturi mixer and output. The product has the advantages of stable gas mixing condition and low operating cost.
